4.7. Substances proposed for declaration as "Allergens"

This is a composite of lists proposed by the SCCS and Cosmetics Europe (ex-COLIPA). Levels arising from their presence in natural ingredients and as impurities in synthetic ingredients are listed in the "Indirect N" and "Indirect S" columns respectively. These are calculated concentrations and do not replace chromatographic quantification of the complete fragrance or the final cosmetic product.

"-" indicates that the substance is not analytically detectable < 1ppm. It could still arise as an impurity in added synthetics or natural ingredients at levels below 1ppm.
